Due November 27 and 29, 2006 10:00am in class.

After Thanksgiving holidays, on Monday and Wednesday, each group will present its final project to the rest of us.

The presentation should be a maximum of 15 minutes long.

For the presentation, you should have four parts:

1) Brief overview of the overall concept, the users, the core functionality (2 minutes)

2) A description of the user interface in terms of its presentation (3 minutes)

3) A narrative of one interesting core function. If you have a working computer prototype, you can "walk" us through this, or you can give a storyboard with drawings or screen mockups. (5 minutes)

3) Description of the usability testing you have done or will do, and what you found or expect to find. (5 minutes)

I will have available all the multi-media equipment. If you want to bring your own laptop we can hook that up. Or if you want to use my Mac, let me know in advance so we can put the software on it.
