CIS 610 Teaching Effectiveness  
Fall 2012 Week 6

Caveat: These summary notes are posted to provide an overview of class topics and discussions. The nature of real-time, face-to-face interaction precludes complete replication outside of the original setting; class notes posted at this website are general outlines rather than transcripts of classroom events.

Agenda

Logistics – Remaining work outside of class meetings – (1) classroom observations – (2) teaching statement – (3) project.

To avoid an end of term crunch, come talk to me and/or turn in your proposal early. It’s best if the project is something you’ve been meaning or wanting to do anyway. Here’s your chance.

In the next two weeks of class there will be some time to catch up on topics and questions.

Jason Schreiner from TEP talked about classroom observations and videotaping.
