Contacts

(Contacts and ContactsUI)

Used to programmatically access contact data
CNContactStore represents the user’s contacts database, queries supported with NSPredicate
CNContact / CNMutableContact represent contacts in the database
Various other types to represent the other database content
Formatting objects available for localized formatting
ContactsUI

CNContactPickerViewController used to present system provided contact picking UI
CNContactViewController used to present system provided contact display UI
Delegate responds to selection of items in the address book
Supports predicates for limiting what content is shown
