CIS 330: Project #3D  
Assigned: May 14th, 2015  
Due May 20th, 2015  
(which means submitted by 6am on May 21st, 2015)  
Worth 3% of your grade

*Please read this entire prompt!*

Assignment:

1) Write a new, concrete type of Source called “PNMreaderCPP”. This reader should be identical to your PNMreader class, but it uses C++ file I/O (ifstream) to read the data.

2) Write a new, concrete type of Sink called “PNMwriterCPP”. This writer should be identical to your PNMwriter class, but it uses C++ file I/O (ofstream) to write the data.

3) Modify the main3C.C program to use your new classes in the place of the old ones.

Turnin: a tarball (with Makefile) with all of your source code. The program should run identically to the 3C (just using C++’s file I/O mechanisms).
