Mission Statement

The Office of Strategic National Alien Planning (O-SNAP) is charged with planning for and executing plans related to real and imagined extraterrestrial encounters.

The Division Overseeing Information Technology (DO-IT) supports the overall O-SNAP mission by providing high performance computational solutions to address various information processing challenges.

(Slides stolen directly from last years TAs)
On-boarding Tasks

• Find the lab (hint you can't get to it from the building it is in)
• Provide information to help with lab scheduling
• Exercise Cilk, TBB and OpenMP compilers
• Submit a token assignment
Lab Scheduling

Labs for Parallel Programming are scheduled for 9, 10 and 11 AM on Fridays
Cluster Access

You will have access to 2 computer clusters on campus:

• What Operational Parallel Resource (WOPR)

• Applied Computational Instrument for Scientific Synthesis (ACISS)

• A third resource is an OVA of our WOPR environment you can run in Virtualbox
WOPR Access

- WOPR is the cluster formed by the machines in this lab.
- Please see the Craig or Tom for help with your account.
- Remote access to wopr.nic.uoregon.edu and aciss.uoregon.edu is via ssh.
ACISS Access

• ACISS is administered by Robert Yelle and exists in a machine room somewhere on campus.

• It is the largest cluster you will have access to via this course.

Account requests are made via:
https://aciss.uoregon.edu/newuser
Thank You for Attending On-boarding

We hope you enjoy the course.

Please provide feedback during the course regarding workload, topics, and structure.

This is an experimental course and your feedback will help us to tune the delivery.
