Let’s build a simple website to help improve your web presence.

Build a website including your name, technical skills and interests (e.g., programming languages, frameworks, tools), highlighted projects (with links, if available), links to your linkedin/github, etc. Education and work experience are optional.

You may host this page however you’d like. I recommend using your CS account – instructions here:

Optionally, you may have your website listed here:

https://cs.uoregon.edu/people/current-students

I have been assured by the systems staff that this page is currently being improved. 😊 To have your website listed here, send the URL along with your name, degree in progress, and an avatar image to webeditor@cs.uoregon.edu.

Submit your URL to Canvas (see Assignments section for submission link).
